RESTORATION HARDWARE

WREATH LETTER WALL DECAL INSTRUCTIONS

The pieces included with your RH Baby & Child decal are listed below. The decal mounts easily to any smooth, flat surface and can be removed without damaging walls. However, once the decal is removed, it cannot be reused. The decal should leave your surface in the same condition it was in prior to application. However, it is sensitive to extreme temperatures and direct sunlight. Due to variations in wall surfaces, RH Baby & Child cannot be held responsible for damages to surfaces.

TRANSFER APPLICATION INSTRUCTIONS:

Please read all instructions before you begin. Clear a workspace on a table or floor.

1. Prep your surface

A smooth, dry and clean surface is required. Allow 2 weeks for fresh paint to cure completely.

2. Rubbing your graphic

Lay the design on a hard surface, graphic side down. Firmly rub or squeegee over the entire backing with your hand or squeegee.

3. Roll and pull

Starting at one corner, slowly peel away the backing paper with a rolling action. The decal will adhere to the transfer tape. (Some intricate patterns want to stick to the backing; simply stop peeling, roll back a bit, and re-press the decal on to the transfer tape before resuming.)

4. Transfer

Hold the corners of the transfer tape (with decal), keeping the sheet straight. Be careful not to let tape fold in on itself as it's very sticky. Press to the desired surface. Smooth one edge onto the surface first, to avoid wrinkles and bubbling, and continue firmly smoothing out the tape all the way down.

5. Finishing

Now that you've applied the graphic, it's time to remove the transfer tape. Starting at one corner, slowly roll the transfer tape back along the surface. If any part of the decal sticks to the tape, simply stop pulling, roll back a bit, and re-press graphic onto the surface, and continue peeling away, slowly.

To Remove: Pick at an edge with your fingernail, and slowly peel the decal off the surface. It's just like taking off a sticker. If you applied your graphic to a less porous surface, blow-dry the decal on low heat to warm it up. This will release the adhesive and make it even easier to peel off.
