RESTORATION HARDWARE

drapery &  
window hardware

## our drapery, your style

Our classic drapery options are ideally suited to a child's bedroom. Whether you prefer elegant Washed Silk, polished yet casual Linen-Cotton or casually tailored Cotton Canvas, all offer insulation, light absorption and privacy.

## choose the right style drapery

**rod pocket** A versatile option, rod-pocket drapery has a fabric casing along the top that can be slipped over a rod without the need for hooks or rings. In this fashion, rod-pocket panels are used as decorative drapes rather than functional drapes that can be opened and closed.

For functional drapery, we recommend a rod and rings. Our rod-pocket drapery can be used with either clip or loop rings. Lined drapery includes drapery hooks, which are for use with loop rings to create folds in the drapery for a more tailored feel. We recommend using drapery hooks with lined drapery. For sheer and unlined drapery, we recommend using clip rings or rod-pocket style.

We recommend using 7 drapery rings to hang each rod-pocket panel.

**roman shade** Casually elegant, our Roman shades pair the detailed tailoring of shades with heavy weight and exceptional drape. A series of soft folds are reinforced with horizontal ribs.

**valance** Typically used with drapery to conceal non-decorative drapery rods. Adds a polished accent to any nursery or bedroom.

## light and privacy

**blackout lighting** Provides insulation and superior light absorption. In addition to maintaining privacy, blackout lining gives drapery additional weight and body.

**sheers** Used alone or hung behind drapery, sheers change the effect in a room as the light shifts throughout the day. They can also hide a less-than-perfect view, bringing the focus back into the room.

## care & cleaning

If your drapery has developed fold marks, we recommend professional steam cleaning, or use a hand-held steamer on the back side of the drapery.

Dry cleaning is recommended for all of our drapery to prevent shrinkage and discoloration.

Routinely vacuum your drapery every 3 to 4 months with the dust brush attachment on a household vacuum cleaner.

To store drapery, hang it in a breathable covering, avoiding moisture and light.

# window hardware

## choose a style to complement your décor

Select window hardware that's in balance with the scale of your room. Window rods are available in three lengths and two diameters, with various styles of finials.

Coordinate the window hardware finish with other hardware and furnishings throughout the room.

Choose a finial that accents an architectural element or accessory in the room.

## choose the right hardware for the job

**double-rod conversion kits** Conversion kits are used to layer drapery. Sheers can be hung behind heavier drapery for versatility in regulating light and privacy.

**tiebacks** Tiebacks are used to pull drapery away from the window in a stylish drape. Tiebacks are available in styles to match or coordinate with finials.

**rings** Clip rings are used to hang sheer and unlined drapery, while loop rings are used only with our lined rod-pocket drapery, which includes drapery hooks for this purpose.

# measuring tips

## how to measure for drapery

**measuring tips for rod pocket** Measure each window and doorway individually to the nearest  $\frac{1}{8}$ " with a steel tape measure. Measure each window and doorway individually. Often windows and doors that appear to be the same size are not. Precise measurements are key.

**choose the right width of drapery for the look you want** Measure the width of the window. For optimal results, add a 3-6" overlap on each side of your window.

Add width for fullness; adding extra inches to the width of your window gives drapery a wavy or full look. Our styles are made without added fullness.

To determine how many panels you need to achieve the desired fullness, take the window's width measurement and multiply it by 1 (tailored), 2 (standard) or 3 (full). For example, if you like a gathered look and the window is 70" wide, you'll need 210" of panel width (70" x 3).

To reduce light filtration, extend the width and height of lined panels beyond the window frame.

**choose the right length of drapery for the look you want** Restoration Hardware Baby & Child drapery lengths are measured from the top of the fabric to the bottom. For example, rod-pocket drapes are measured from the top of the rod pocket to the bottom of the hem.

There are two options for hanging your drapery. Drapery can be displayed either to the floor or to the sill. In both cases, drapery is normally installed 4" above the windows or near the ceiling.

**floor length** Drapery should hang about  $\frac{1}{2}$ " above the floor. Measure the length of your window to the floor.

**sill length** Drapery hangs to the windowsill or just below the sill. This is a good option for a window above a piece of furniture or for a more casual look.

## how to measure for window hardware

Allow 3-6" on each side of the window for when the drapes are completely open.

Be sure to consider the extra wall space needed for decorative finials, as the rod dimensions do not include the length of the finial.

For low-light filtration, mount the curtain rod 6" above the trim, and allow the rod width to extend at least 3" beyond the window's actual width.

When hanging rod-pocket drapery, there is some rod "take-up" when the material is gathered onto the pole. If you want the drapery to hang just to the floor, install rods with diameters less than 2" approximately 1" lower than the finished length. Rods with diameters 2" or greater should be installed approximately 2" lower.

Drapery that is hung from rings requires the drapery rods to be installed at a height greater than the length of the drapery. With the drapery attached to the rings, measure the distance between the bottom of the rod and the top of the drapery, and add this measurement to the length of your drapery to determine the correct height for installing the window hardware.

Instructions are provided with all of our window hardware for installation on most surfaces. Install brackets a maximum of 50" apart to ensure optimum support.

Window hardware is usually mounted 4" above the window. To add height to a room, mount the rod closer to the ceiling. If you want a layered look for your drapes, convert an existing single rod into a double with our conversion kit.

Using a metal tape measure, determine the width of your window, taking into account whether you'd like a wall-mounted or a trim-mounted rod.

## measuring tips for roman shades

First, it's important to decide whether you want to mount the shade inside or outside the window casement. An inside mount doesn't cover the window molding and provides a more finished look. An outside mount makes the window appear larger and is a good option when there is insufficient depth for inside mounting. If using with a valance, we recommend mounting the shade inside the window casement.

**inside mount** Attach hardware brackets just inside the window frame. Add ¼" to the overall width of shade to ensure it will fit inside the window frame.

**outside mount** This measurement is more subjective based on personal style and preference. Attach hardware brackets at least 2" above the window frame. Add 2-4" to the overall width of shade to ensure it overlaps the window frame.

## measuring diagram for drapery & window hardware

Use this diagram to jot down measurements and sketch ideas.

- a - Outside window frame to outside window frame
- b - Top of window frame to bottom of window frame
- c - Top of pole to top of molding
- d - Bottom of ring to floor
- e - Top of pole to floor
- f - Width of pole, not including finials
